Dear [redacted]

STAT

Thank you for your Progress Report dated 27 December 1947, and for previous unacknowledged reports.

I hope that the installation of defective RG 85/U cable and of soft-drawn antenna wire will not cause any later difficulty. I agree that it was the only thing to do under the circumstances. The defective shipments have been called to the attention of Services Branch, for referral to the respective suppliers and for the record.

It has been requested that Los Angeles Signals Center be instructed to install the four teletype machines on your pony circuits and to service them until one of your technicians can be spared to learn maintenance. I am also investigating the possibility of supplying you with a CIA reperforator for these circuits, since the use of one associated with the AT&T circuit is unauthorized and perhaps will be impossible when that circuit is regraded to 60 wpm. AT&T is being alerted to the installation of the new circuit to replace PL7488 about 1 March. It is contemplated that you will retain your circuit to UWL, however, for direct communication with the Pacific and emergency contact with Washington.

Since your major problems are now cleared, and only routine, if arduous, work is necessary to complete the project, please submit Progress Reports only every two weeks in the future.

Sincerely,

PKR:bhr This document part of classified integrated file. NAME CHECK required prior to individual classification action.

L. K. WHITE
Chief, FEIB
